

# ACO Surface Water Management

**IKEA Zagreb, March 2014.**

## **IKEA Zagreb** Croatia finally have IKEA!

After more than a decade of planning, location changing and fighting bureaucracy, IKEA has finally arrived in Croatia. After construction of access roads and modification of nearby passing highway to allow easy access to newly developed location in 2012, in mid 2013 construction works have started on IKEA building itself. First ACO delivery has included 10 sets of

bypass light liquid separators for access roads and parking area with total hydraulic capacity of 1.300 lit/sec (not including separators delivered for roads outside building area which included additional Oleopator C separators. Delivery of drainage system for kitchen includes one Lipumax C grease separator and ACO stainless steel channels and gullies.
